**Town of Dedham, Massachusetts  
Weston & Sampson Project No. 2140084.A**

August 27, 2015

Mr. Jason L. Mammone, PE  
Director of Engineering  
55 River Street  
Dedham, Massachusetts 02026

**Re: 2014 Private Building Inspections**

Mr. Mammone:

Weston & Sampson Engineers, Inc. is pleased to submit our final report for the 2014 Private Building Inspections. The report presents our findings for work completed in Precincts 4, 5 and 6, including map and database development, and private building inspections. All work related to this project was performed in accordance with Department of Environmental Protection (DEP) *Guidelines for Performing Infiltration/Inflow Analyses and Sewer System Evaluation Survey, revised January 1993* (DEP Guidelines). The project area Locus Map, Figure 1, is attached.

**Map Development**

Weston & Sampson used the Town of Dedham's GIS data to create a base map for the project. Relevant features such as land use code, parcel ID, edge of road, building footprints, and property numbers were included on the map. Parcels inspected as part of the 2014 Private Building Inspection Program are colored green (no answer), red (positive), orange (suspect), blue (negative), black (not admitted), or black with yellow dots (building on septic). Parcels inspected as part of the previous 2012 Municipal Building Inspection Project are indicated on the map. Parcels outside the project area are colored grey. A copy of the Building Inspection Summary Map, Figure 2, is attached.

**Database Development/Data Collection**

Weston & Sampson developed a database in Microsoft Access (2013 version) to manage building inspection data. Information for each inspection and inspection attempt is stored in the database. Each record in the database was linked to the GIS to track the results of the project. An electronic copy of the database will be provided to the Dedham GIS Department.

Weston & Sampson used a custom iPad application to collect inspection data electronically. The application transmitted information wirelessly to an office-based server to our building inspection database. A sample of the building inspection form is included in Appendix A.

**Project Background/Building Inspections**

The building inspecting process involved a two (2) person team entering the basement or lowest level of as many buildings as possible within the project area to identify sources of inflow to the sanitary sewer system. Inflow sources identified during building inspections included sump pumps, floor drains that are subject to inflow, and open sewer cleanouts that allow clean water to enter the sanitary sewer system. These sources are often used by the building owner to relieve flooding conditions in or around the building during wet weather.

A public notification campaign was conducted prior to and during the building inspection program. A press release describing the project was posted on the town's website as well as in the [Dedham Transcript](#) (see Appendix B). In addition, a package including a sewer inspection notice letter, door-to-door inspection policy, upcoming building inspection notice, and consent to entry and inspection form was provided to the town for distribution to each resident of the project area prior to beginning the inspection program (see Appendix C). Each piece of public notification included a point of contact and phone number so that individual appointments for building inspections could be scheduled at the property owner's convenience.

Following the introduction of the program, the inspection team visited each of the 3,580 properties in the project area in a cold-calling door-to-door fashion for the first round of inspections.

- If the property owner was available and allowed the team to enter the building, an inspection was completed.
- If the property owner refused inspection, the inspection was recorded as "Not Admitted."
- If the property owner was not available, a "Building Inspection Program" notice was left at the door and the inspection was recorded as "No Answer." The notice provided a program overview as well as contact information to schedule a building inspection appointment at the property owner's convenience. A copy of the notice is included in Appendix D. For properties recorded as "No Answer", the process was repeated with a second round of door-to-door inspections.

The door-to-door inspections were performed for all precincts June 16 through October 31, 2014. The inspection crew scheduled all remaining appointments on November 6, November 20 and December 5, 2014. Cold-call door-to-door inspections were not conducted during this time.

### ***Inspection Results***

Internal building inspections were performed at 1,510 of the 3,581 locations (42%). Property owners refused inspection at 248 properties, 36 of which had septic systems. Contact was made at 49% of the properties in the project area. A summary of inspected and not admitted properties is included in Table 1, *Building Inspection Summary*, and the results of the inspections are shown on the attached project map. Fifty-eight (58) positive and eight (8) suspect sources of inflow were found during the inspections and are detailed in Table 2, *Summary of Positive and Suspect Sources*.

In addition, property inspection logs were developed for each inspection completed and include homeowner consent signature, photo consent signature if applicable, inspection result summary, photos of defects, etc. and will be provided to the town electronically.

The property owners at 1,823 properties did not schedule an appointment and were not home during the two rounds of door-to-door visits. These parcels are listed in Table 3, *Buildings Not Inspected*, and are colored green on the Building Inspection Summary Map, Figure 2.

### ***1994 Building Inspections***

A prior building inspection program was conducted in 1994 and identified 226 positive or suspect sources throughout town. Of these, 62 were outside of the project area for 2014 and could not be used for comparison. Eight (8) properties no longer exist. Inspections were attempted at the remaining 156 properties. The resident or owner was not home at the time of inspection for 73 properties and entrance was denied at five (5). Sixty-eight properties have removed or redirected the inflow source found prior, while ten (10) remain positive or suspect.

The results of this comparison are included in Table 4, *1994 and 2014 Building Inspection Results Comparison*.

### **Cost-Effectiveness Analysis (CEA)**

In order to determine if rehabilitation is justified for a particular source of I/I, a CEA is conducted. The CEA compares the estimated cost for removing I/I to the estimated savings in transportation and treatment (T&T) costs resulting from the removal of I/I. T&T costs consist of capital costs to expand and upgrade the wastewater system plus annual Operation and Maintenance (O&M) costs. O&M costs are directly related to the quantity of flow being discharged to pump stations and treatment facilities. Increased usage will be reflected by increased O&M costs for electricity, cleaning, equipment repair, etc.

The calculated T&T cost for Dedham, using MWRA and the Town of Dedham's O&M and capital costs, is \$1.18/gpd. In accordance with DEP Guidelines, the present worth of this T&T cost must be extended over the life of the rehabilitation method, estimated at 20 years, using a discount rate (or annual percentage rate) of 4.625% (DEP FY15). The present worth of the T&T costs for the Town of Dedham, assuming a 20-year rehabilitation life cycle, is \$15.21/gpd. The calculation is provided in the T&T Memo in Appendix E.

It should be noted that T&T costs can change annually. Therefore, if the recommended rehabilitations are not conducted within a year, it is recommended that T&T costs at the time of construction be compared to the value used for this analysis. Typically, if T&T costs increase, the amount of "cost-effective" rehabilitation may also increase.

The evaluation of cost-effectiveness for a particular I/I source is also based upon the portion of I/I that can be eliminated through rehabilitation. The percentage of I/I that can be removed depends on the source and the rehabilitation method. It is estimated that indirect inflow and infiltration sources are 50 percent removable to account for migration from a rehabilitated location to a location not being repaired. The percentage of direct inflow removed is assumed to be 100 percent because direct inflow repairs typically involve the redirection of 100 percent of this flow to drainage structures.

Peak design storm inflow is calculated for the direct inflow sources identified during this investigation using the Rational Formula for runoff. A calculation is attached in Appendix F for reference.

A typical sump pump is approximately 1/3 horsepower, located 10 feet below its discharge location and may run for 30 seconds every 5 minutes during a rain event. Based on these assumptions, each sump pump contributes an estimated 6,192 gpd of peak design storm inflow. DEP Guidelines recommend using an average inflow rate between 4,320 and 8,640 gpd per sump pump connected to the sewer system when evaluating the cost-effectiveness of redirection. Using this calculated inflow along with the DEP Guidelines recommendation, Weston & Sampson uses a peak inflow rate of 7,200 gpd (5 gpm) for each sump pump observed to be connected to the sewer. A calculation is included in Appendix G for reference.

While the town may determine inflow source removal to be funded solely by homeowners, we have estimated average as-bid construction costs for the repairs for the CEA. The rehabilitation costs used in this report do not include the cost of additional investigation work, engineering services or police details that may be required during design and construction. The site for each source removal will be different and actual removal costs will be determined on a case by case basis. For example, some inflow sources will be able to be inexpensively redirected to the surface, while other sources may be more complex and require rerouting to the town's stormwater system. A list of rehabilitation unit costs used in the CEA is included in Appendix H.

Table 5, *Cost-Effectiveness Analysis for Inflow – Positive Inflow Sources*, shows the T&T cost associated with the observed I/I as well as recommended rehabilitation methods and costs. Positive

sources from previous smoke testing projects identified in Precincts 4, 5 and/or 6 are included in the CEA. The CEA results produce one of the following conclusions:

- **Excessive** indicates that the cost to redirect the inflow source is less than the associated T&T cost and that rehabilitation is recommended.
- **Value-Effective** indicates that the cost to redirect is more than the T&T cost, but rehabilitation is still recommended because of the relative value of the repair. In this case, the T&T cost is within approximately 25% of the cost to rehabilitate the defect.
- **Non-Excessive** indicates that the cost to redirect the line segment is more than the associated T&T cost and rehabilitation is not recommended.

The CEA identified:

- 418,950 gpd of excessive peak inflow. Of this, 418,230 gpd is removable at an estimated rehabilitation cost of \$249,900. The associated T&T cost is \$6,361,278, based on the peak flow value.
- 0 gpd of value-effective removable indirect inflow.
- 0 gpd of non-excessive removable peak design storm inflow.

The above figures total approximately 418,230 gpd of **removable** I/I that is excessive or recommended at an estimated rehabilitation cost of \$249,900. The rehabilitation work is located on private property, as shown in Table 5.

### **Summary, Conclusions & Recommendations**

Weston & Sampson completed 1,510 building inspections throughout Precincts 4, 5 and 6. There was no answer at 1,823 properties. Inspection could not be performed at 248 properties, 36 of which were on septic, as the property owner would not permit entry to our field crew.

Building inspections performed identified **57 direct and 1 indirect inflow sources** to the sanitary sewer system at 57 locations. These sources contribute an estimated **418,950 gallons per day of estimated peak inflow** and include the following.

- 37 sump pumps (37 sump pumps x 7,200 gpd/sump pump = 266,400 gpd)
- One (1) floor drains (1 internal floor drain x 7,200 gpd/internal floor drain = 7,200 gpd)
  - Internal floor drain is a basement sewer pipe below grade with a hole in it; appeared to be draining groundwater during building inspection.
- Nine (9) interior open cleanouts (9 open cleanouts x 7,200 gpd/open cleanout = 64,800 gpd).
  - Below or at grade; appeared to be draining groundwater during building inspection.
- Four (4) exterior open cleanouts (2,832 gpd total)
- Five (5) direct driveway drains (72,763 gpd total)
- One (1) indirect driveway drain (1,440 gpd)
- One (1) roof leader (3,515 gpd)

8 suspect sources were also identified at 7 locations, including 4 floor drains and 4 sump pumps with unknown discharge locations.

The results of the project displayed that a positive trend of illicit connections exists in town (approximately 4 percent of the buildings inspected contained direct inflow sources). These sources

Mr. Jason L. Mammone, PE  
August 27, 2015  
Page 5 of 5

contribute a significant amount of estimated peak inflow to the town's sewer system. It is important to note that five of the positive sources are located directly upstream of areas known to surcharge during wet weather events.

The town continues to aggressively pursue the identification and removal of I/I sources. Extensive investigations of public buildings and sewers have been performed. As the town continues to remove these sources, private sources (identified through building inspections) will become a priority to address. As other MWRA communities continue to remove I/I sources, Dedham's overall flow share may increase, resulting in an increase in sewer rates. In order to stay proactive, it is critical that the town identify and remove private inflow sources.

A Private Inflow Removal Policy should be established to address the repair of defects which are located on private property and to identify new private inflow sources. Inflow removal on private property can be a challenging task for communities seeking to reduce wet weather flows. Weston & Sampson can provide suggestions for components of a Private Inflow Removal Policy such as determining funding options and implementation strategies. The Town of Dedham will need to determine which components will garner the most success based on political climate, financial capabilities and accepting private inflow discharges. Once established, the policy may be used to create a pilot program to eliminate the positive inflow sources discovered during this project.

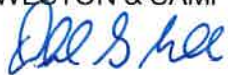

A significant effort was put forth to inspect all of the buildings in the project area and the project was successful in identifying inflow sources in the buildings that were inspected. However, the project was not as effective as expected due to lower than average resident participation. Typical averages range from 60 to 80 percent. If the town employed a less voluntary strategy for homeowner participation in the program, it is likely that the resident involvement would increase. This would lead to an increase in positive source identification, a fully effective program and further reduce flow in the system.

Weston & Sampson recommends continuing the program by conducting building inspections (using a less voluntary approach) in Precincts 1, 2, 3 and 7 at approximately 4,650 buildings for an estimated \$252,500. It is also recommended that attempts are made to inspect properties in Precincts 4, 5 and 6 that were not inspected during this project. If the town does not wish to revisit every property where no contact was made, an allowance may be set for the 78 properties (no answer or entry denied) where positive or suspect sources were identified during the 1994 building inspections, properties in wet areas and properties with nearby positive sources to be targeted first. We are available to meet with the town to discuss these options and assist in developing a Private Inflow Removal Policy to be adopted.

We wish to thank you and the members of the Engineering Department staff for their assistance while completing this project. We are available to meet with you at your earliest convenience to discuss this report. Please do not hesitate to contact me at (978) 532-1900 x2297 with any questions or comments you may have.

Very truly yours,

WESTON & SAMPSON

Donald G. Gallucci, PE  
Vice President/Program Manager

**SUMMARY**

**58 POSITIVE SOURCES**

(AT 57 LOCATIONS)

**8 SUSPECT SOURCES**

(AT 7 LOCATIONS)

NOTE: See Appendix G for peak design storm inflow calculations for roof leaders and driveway drains.  
See Appendix H for peak design storm inflow calculations for sump pumps.

**TABLE 3**

**BUILDINGS NOT INSPECTED**

<b>Total Recommended Removable:</b>	<b>417,510</b>	<b>N/A</b>	<b>720</b>	<b>\$6,361,278</b>		

**NOTE:** 1 - Estimated Inflow is based on DEP Guidelines for Performing Infiltration/Inflow Analyses and Sewer System Evaluation Survey (see appendix F)  
Weston & Sampson uses an inflow rate of 7,200 gpd for sump pumps (see appendix G)  
2 - Indirect Inflow is assumed to be at least 720 GPD for lateral defects, 1,440 GPD for manhole defects and 2,880 GPD for mainline defects.  
In cases where inflow was identified through dye flooding, actual observed flow rates were used.

**APPENDIX B**  
**PRESS RELEASE**

## **PRESS RELEASE**

The Town of Dedham has initiated a program to reduce the amount of groundwater (infiltration) and rainwater (inflow) entering the sewer system. Through this program, sources of Infiltration and Inflow (I/I) will be identified and removed. When these sources are removed, the quantity of flow entering the Dedham sewer system will be lowered and the risk of sewer backups and overflows will be reduced.

Inflow comes from sources such as roof gutters, yard and driveway drains, and sump pumps that are improperly connected to the sewer system. The flow contributed to the sewer system by these sources is clean water and does not require treatment. However, when this clean water enters the sewer system, it may contribute to sewer backups and overflows and is needlessly treated at the MWRA's Deer Island Treatment Facility.

The town's consultants, Weston & Sampson will be conducting building inspections throughout Dedham to identify sources of inflow in June through October 2014, Monday to Friday, between 8:00 a.m. and 7:00 p.m. For your convenience, building inspections may be scheduled in advance.

Building inspections, lasting about 10-15 minutes, will be performed by a two-person team. The team will evaluate the basement or equivalent lowest level of each building to determine if any of the common sources of inflow may be connected to the sewer system. The exterior of each building will also be checked for potential inflow sources. All persons performing building inspections will have proper photo identification.

Once the investigation is completed, the homeowner will receive a report on any positive inflow sources identified in the building. These connections are not allowed under the Massachusetts Building and Plumbing Codes and the town's Sewer Use Regulations and the town would like to work with each individual homeowner to discuss the redirection of the identified sources.

To schedule an appointment or if you have any questions, please call our wastewater consultant, Weston & Sampson at (781) 355-7706.

## DEPARTMENT OF INFRASTRUCTURE ENGINEERING

May 22, 2014

Re: Building Inspection Program

Dear Homeowner/Commercial Building Owner:

The purpose of this letter is to inform you of an upcoming Building Inspection Program in your area, and to ask for your assistance. If you received this letter and you are not connected to the Town's sewer system, then please disregard this information.

The Town of Dedham has initiated a program to reduce the amount of groundwater (infiltration) and rainwater (inflow) entering the Town's sewer system. Inflow comes from sources such as roof gutters, yard and driveway drains, and sump pumps that are improperly connected to the sewer system. The flow contributed by these sources is clean water that does not require treatment. However, when this clean water enters the sewer system, it may contribute to sewer backups and overflows and results in increased sewer rates for all. Due to these and other adverse impacts, these connections are prohibited.

The Town, through its Department of Infrastructure Engineering (hereinafter referred-to as the "Department") is conducting an extensive investigation of the sewer system to identify and eliminate sources of infiltration and inflow. As part of this investigation, the Department has made arrangements with an outside consultant, Weston & Sampson, to send teams of inspectors to inspect private properties for the purpose of identifying prohibited connections. At this time, participation in the program is voluntary and, the Town is not currently mandating that property owners submit to such an inspection. Those who do, however, will receive amnesty insofar as they will not be subjected to fines or penalties that may arise as a result of having a prohibited connection, while those who do not participate may not receive such amnesty in any future inspection programs.

Building inspections, lasting about 10-15 minutes, will be performed by a two-person team from the Town's wastewater consultants, Weston & Sampson, in a "door-to-door" fashion during the dates identified in the attached notice. You do not have to allow the inspectors in if you do not want to and you can ask them to leave at any time once they are inside. If you do consent to an inspection, the team will evaluate the basement or equivalent lowest level of each building to determine if any of the common sources of inflow may be connected to the sewer system. The exterior of each building will also be checked for potential inflow sources. All persons performing building inspections will have been certified by the Police Department through criminal background checks, and they will have proper photo identification.

Building inspections will be conducted Monday through Friday, between 8:00 a.m. and 7:00 p.m. from June through October 2014. Please see the attached notice for when Weston & Sampson is expected to be going door-to-door in your area. For your convenience building inspections may be scheduled in advance or you may have the inspection conducted by a licensed plumber of your choosing.

Once the investigation is complete you will receive a report detailing any inflow sources found at the home. These connections are not allowed under the Massachusetts Building and Plumbing Codes and the Town's Sewer Use Regulations and, once the extent of the issue is identified, the Town will develop a plan for redirection of the identified sources.

The Town of Dedham is asking every homeowner to help by taking part in the Building Inspection Program. It is not the intent of the Town to be punitive in this endeavor but to work with the homeowner if any positive inflow sources are identified. To schedule an appointment or if you have any questions, the Town of Dedham requests that you please call our wastewater consultant, Weston & Sampson at (781) 355-7706.

For additional information and downloadable content on the Private Building Inspections Program, please visit the Town's website at [www.dedham-ma.gov/index.cfm?pid=25939](http://www.dedham-ma.gov/index.cfm?pid=25939) . Any updates pertaining to this program will be posted on this website, so we encourage you to check back frequently.

Attached to this letter please find the following:

- Summary of the Door-to-Door Inspection Policy
- An Upcoming Building Inspections Notice which describes when Weston & Sampson will be in your area
- A Consent To Entry And Inspection form that can be signed ahead of time and handed to Weston & Sampson the day of your inspection. Weston & Sampson will also have a digital version of this consent form on their iPads that can be executed at the time of your inspection, should you so desire.

Thank you for your anticipated cooperation in this important matter.

Very Truly Yours,

Jason L. Mammone, P.E.  
Director of Engineering

NOTE: If you received this letter and you are not connected to the Town's sewer system, then please disregard this information.

**TOWN OF DEDHAM**  
**TOWN MANAGER**

**SEWER INFLOW REMOVAL PROGRAM**  
**DOOR-TO-DOOR INSPECTION POLICY**

**I. Introduction**

The Town of Dedham has initiated a program to reduce the amount of groundwater (infiltration) and rainwater (inflow) entering the Town's sewer system. Inflow comes from sources such as roof gutters, yard and driveway drains, and sump pumps that are improperly connected to the sewer system. The flow contributed by these sources is clean water that does not require treatment. However, when this clean water enters the sewer system, it may contribute to sewer backups and overflows and results in increased sewer rates for all. Due to these and other adverse impacts, these connections are prohibited.

The Town, through its Department of Infrastructure Engineering (hereinafter referred to as the "Department") is conducting an extensive investigation of the sewer system to identify and eliminate sources of infiltration and inflow. As part of this investigation, the Department has made arrangements with an outside consultant, Weston & Sampson, to send teams of inspectors to inspect private properties for the purpose of identifying prohibited connections. At this time, participation in the program is voluntary and, the Town is not currently mandating that property owners submit to such an inspection. Those who do, however, will receive amnesty insofar as they will not be subjected to fines or penalties that may arise as a result of having a prohibited connection, while those who do not participate may not receive such amnesty in any future inspection programs.

In order to ensure that such inspections are conducted in a manner that protects the safety of residents and the Town's consultants, and to ensure that such inspections do not unnecessarily infringe upon individual rights of privacy, the Town Manager hereby adopts this policy establishing a protocol for conducting prohibited sewer connection inspections.

## **II. Registration**

1. Every person intending to conduct inspections of private property must first register with the Chief of Police at least fourteen (14) days prior to conducting the first inspection by submitting an application on a form provided by the Chief.
2. The application shall include the following information:
  - Name;
  - Address for all places of residence within the last three years;
  - Date of birth;
  - Name and address of all employers within the last three years;
  - A recent photograph of the applicant; and
  - Make, model, registration number and owner of any vehicle to be used while conducting inspections.
3. The applicant shall complete a Cori Acknowledgment form authorizing the Chief or his designee to access the applicant's conviction and criminal case data.
4. Consistent with the Town's CORI Policy, following notification to an individual and an opportunity to dispute the criminal history findings, the Police Chief shall refuse to register an individual who has been convicted of murder/manslaughter, rape, robbery, arson, burglary/breaking and entering, assault, larceny, firearms charges and drug distribution charges, as such persons pose a substantial degree of dangerousness to minors and other persons vulnerable to becoming victims of the violent crimes so listed. The Police Chief shall also refuse to register a person who is a sex offender required to register with the Sex Offenders Registry Board and who is finally classified as Level 2 or Level 3 Sex Offender, as such persons have been found to have a moderate to high risk of re-offense and pose a substantial degree of dangerousness to minors and other persons vulnerable to becoming victims of sex crimes.

5. The Police Chief, after a review, shall furnish each person accepted into the program with a registration card which shall contain the following information:
  - The name of the person;
  - Expiration date;
  - A recent photograph;
  - A statement that the individual has been registered with the Town of Dedham.
6. Registration cards are non-transferable and are valid only for the specific applicant and for the specific period of time specified by the Chief.
7. The Chief may revoke the registration of any person who violates any provision of this policy or who is found, after investigation by the Chief or his designee, to have conducted himself in a threatening, abusive or illegal fashion in the course of participating in the inspection program.

### **III. Pre-Inspection Procedure**

1. At least seven days prior to beginning inspections in a particular area, all residents in that area shall receive a targeted mailing containing an explanation of the program and the purposes of the inspection. Said mailing shall include an outline of this Policy and directions for accessing the full policy on the Town's website.
2. All property owners in the targeted area shall be informed of the starting and ending dates for inspections in their area. No inspections shall be conducted before or after those dates unless a property owner makes an individual appointment.
3. Prior to the commencement of inspections, the Chief shall be provided with a schedule of when each area of the Town is to be inspected.
4. Property owners shall be given a telephone number or e-mail address by which they can contact the Department to schedule an inspection. Property owners shall also be given the option of submitting an inspection report from a licensed plumber of their choosing in lieu of inspection.

5. Property owners shall be informed that participation in this program is voluntary and that no one is being compelled to allow inspectors to enter their property. Property owners shall be further informed that those who participate will receive amnesty with regard to any applicable fines or penalties that may arise as a result of having an illicit connection, while those who do not participate will not receive such amnesty.

#### **IV. Inspection Procedure**

1. Persons engaging in inspections must display their Town issued registration card on the outermost portion of their clothing at all times while participating in the inspection program and show such card to any person whose property is subject to inspection or upon request of any police officer.
2. All inspections shall be conducted by teams of 2 registered individuals.
3. Inspections shall take place Monday through Friday, between 8:00 am and 7:00 pm, unless an individual property owner requests that the inspection occur outside of said days or hours.
4. Upon approaching any residential premises, the inspectors shall proceed directly to the front door, knock and announce the purpose of their visit. If the door is opened, the inspectors shall not enter the premises until they have explained the purpose of their presence to the owner or other legal occupant, and provided them with a fact sheet provided by the Department, which fact sheet shall include a telephone number that the owner or occupant can call to confirm the identity of the inspectors.
5. No inspector shall enter any portion of private property beyond the driveway and/or walkway leading to the front door, including but not limited to rear and side yards, without the express written consent of the owner or occupant of the premises. Consent must be obtained, in writing, on a form provided by the Chief, which must be signed by an adult over the age of 18. Prior to asking for consent, the inspectors shall clearly inform the owner or occupant that they may withhold consent for any reason, and that they may schedule a more convenient time for the inspection to take place.

James A. MacDonald, Chairman

TDD (781) 326-4946

WEB SITE  
[www.dedham-ma.gov](http://www.dedham-ma.gov)

6. If the owner or other adult occupant is not present, the inspectors shall immediately and peacefully depart from the premises. The inspectors shall not accept consent from any person under the age of 18 or from who they reasonably believe does not have the capacity to consent.
7. The inspectors shall immediately and peacefully depart from the premises, whether invited or not, when requested to do so by the owner or occupant.
8. Inspectors shall not enter any area of the premises which are not reasonably likely to contain evidence of a prohibited sewer connection and they shall not enter any area of the premises if prohibited from doing so by the owner or occupant.
9. Inspectors may take photographs of illicit sewer connections with the express written consent of the owner or occupant. No other photographs of the premises or its occupants may be taken.
10. No inspector shall conduct himself in a threatening, abusive or illegal fashion in the course of participating in the inspection program.
11. Once consent is given, no person shall threaten, abuse or harass the inspectors, and the inspectors may terminate the inspection for any reason they deem necessary.
12. Upon conclusion of the inspection, the inspectors will prepare a written report detailing the date of the inspection, the time the inspection began, the time it concluded, all areas inspected and the inspectors' findings. The duly executed consent form and any photographs taken shall be appended to the report, and the report will be sent to the property at the conclusion of the program.
13. If the inspectors are unable to obtain consent of the owner or occupant or if the inspection is not completed for any reason, the Department shall follow-up with the owner by mailing notice of the date and time of the attempted inspection and inviting the owner to schedule an inspection at another time.

## DEPARTMENT OF INFRASTRUCTURE ENGINEERING

### **\*NOTICE\***

## **UPCOMING BUILDING INSPECTIONS**

Employees of the Town's wastewater consultants, Weston & Sampson, will be in your area between June and October 2014 to conduct inspections of private residences as part of the Town's sewer inflow removal program. The program is more fully described in the attachments to this Notice.

Building inspections are being conducted by two person teams in a "door-to-door" manner, Monday through Friday, between 8:00 am and 7:00 pm. Inspections are expected to last 10-15 minutes and will require entry into the basement or lowest level of your home. Inspectors may take photographs if you authorize them to do so.

All authorized inspectors will have photo identification issued by the Town of Dedham Police Department. **DO NOT ALLOW ANYONE INTO YOUR HOME UNLESS THEY HAVE SHOWN YOU PROPER IDENTIFICATION.**

Please be advised that you are not required to allow inspectors to enter your property and no one will enter unless you have provided written consent by signing the form enclosed herewith.

If you wish to schedule an inspection at a particular date or time, or if you prefer to have your inspection conducted by a licensed plumber of your choosing, the Town of Dedham requests that you please call our wastewater consultant, Weston & Sampson at (781-355-7706).

## DEPARTMENT OF INFRASTRUCTURE ENGINEERING

# CONSENT TO ENTRY AND INSPECTION

I, \_\_\_\_\_, as the **[owner or legal resident over the age of 18]**, of the real property located at \_\_\_\_\_, Dedham, Massachusetts (the "Property"), hereby consents to entry thereon by the Town of Dedham, by and through its authorized agents from Weston and Sampson, Inc., for the purposes of conducting an inspection thereof as part of the Town's sewer inflow removal program.

I understand that the inspection requires visual inspection of both the interior and exterior of the Property for purposes of identifying potential connections to the Town's sanitary sewer system, and will include entry into the basement or ground floor of my residence.

I **[consent or do not consent]** to the taking of photographs of portions of the Property during said inspection.

If you have any questions or if you wish to confirm that the person presenting you with this form is duly authorized to represent the Town of Dedham, you may call Jason Mammone, Director of Engineering for the Town of Dedham at 781-751-9352.

**DO NOT ALLOW ANYONE INTO YOUR HOME  
UNLESS THEY HAVE SHOWN YOU PROPER IDENTIFICATION.**

By my signature below, I represent and warrant that I have had an opportunity to review this Consent Form and that I am executing it as my free act and deed.

DEPARTMENT OF INFRASTRUCTURE ENGINEERING

**\*NOTICE\***  
**Building Inspection Program**

---

The town's wastewater consultants, Weston & Sampson, have been conducting Building Inspections to identify sources of inflow. Inflow is rainwater that enters sewer pipes that direct rainwater to the sewer system instead of the drain system. Inflow substantially increases the amount of flow in the sewer system and can overload pipes causing sewer backups and overflows. Sump pumps that are connected to the sewer system are considered a source of inflow.

Building inspections, lasting about 10-15 minutes, are being performed by a two-person team. The team will evaluate the basement or equivalent lowest level of each building to determine if any of the common sources of inflow may be connected to the sewer system. The exterior of each building will also be checked for potential inflow sources. All persons performing building inspections will have proper photo identification.

Building Inspections are being conducted in a "door-to-door" manner, Monday through Friday, between 8:00 a.m. and 7:00 p.m. from June through October 2014. However, our recent attempt to contact you and visit your property was unsuccessful. **The Town of Dedham requests that you call Weston & Sampson at (781) 355-7706 to schedule a Building Inspection appointment.**

Thank you for your anticipated cooperation in this important matter.

## **APPENDIX E**

### **T&T COST**

**MEMORANDUM**

DATE: January 29, 2015  
 FROM: Paul Hoye  
 TO: File 2140553  
 SUBJECT: T&T costs for Dedham, Massachusetts using MWRA methodology

Fiscal year 2015 Transportation & Treatment (T&T) costs for sewerage in the Town of Dedham can be calculated using both the MWRA Operation & Maintenance (O & M) and Capital charges, and the town's O & M and Capital costs. Therefore, MWRA charges are based mainly on sewage flow exiting the Town of Dedham. MWRA's FY14 sewerage charges to the Town of Dedham are shown in Table A, and Table B shows Dedham's FY15 O & M and Capital costs.

**TABLE A - MWRA CHARGES TO THE TOWN OF DEDHAM**

ITEM	FLOW (gallons/year)	FLOW (gallons/day)	MWRA CHARGE	COST (\$/GPD)
<b>Average Strength Flow*</b>				
Annual Wastewater Volume	1,289,380,000	3,532,548	\$1,164,104	\$0.3295
Total Suspended Solids (O & M and Capital)	1,289,380,000	3,532,548	\$408,579	\$0.1157
Biochemical Oxygen Demand (O & M and Capital)	1,289,380,000	3,532,548	\$318,510	\$0.0902
Maximum Monthly Flow	N/A	5,483,000	\$807,210	\$0.1472
Population **	1,289,380,000	3,532,548	\$2,325,342	N/A
<b>TOTAL</b>			<b>\$5,023,745</b>	<b>\$0.6826</b>

NOTE:

\*MWRA's charges only apply to average strength flow.

\*\*MWRA's population charges are not flow based, so it is not to be included in T & T cost.

**TABLE B – TOWN OF DEDHAM SEWERAGE COSTS**

ITEM	FLOW (gallons/year)	FLOW (gallons/day)	DEDHAM COST	COST (\$/GPD)
Debt Service (Capital Costs)	1,289,380,000	3,532,548	\$162,972	\$0.0461
O & M	1,289,380,000	3,532,548	\$1,600,000	\$0.4529
<b>TOTAL</b>			<b>\$1,762,972</b>	<b>\$0.4990</b>

Therefore, the total FY15 T&T cost for both the MWRA charges and the Town of Dedham's costs are \$1.1816 /GPD (\$0.6826 + \$0.4990).

According to the Department of Environmental Protection's (DEP) Guidelines for Performing I/I Analyses and SSES this cost of \$1.1816/GPD needs to be extended throughout the life of a rehabilitative measure. The life cycle for a rehabilitative measure can be set by good engineering judgement as well as backup documentation, depending on the type of rehabilitation. For this study, Weston & Sampson will use a life cycle of twenty years.

To find the present worth of a rehabilitative measure over a twenty-year period, a discount rate, or annual percentage rate, is required. According to the DEP, the discount rate for FY15 is 4.625%. To calculate the T&T cost in order to account for this twenty-year period, a present worth analysis must be done. The following formula will calculate the present worth of the T&T cost for the next twenty years:

#### PRESENT WORTH ANALYSIS:

Discount Rate = 4.625% (DEP FY15 Information)

Present Worth Factor:

$$\frac{(1+i)^n - 1}{i(1+i)^n} \quad \text{where: } i = \text{discount rate, or interest rate}$$
$$n = \text{number of years}$$

$$\frac{(1 + 0.04625)^{20} - 1}{0.04625 (1 + 0.04625)^{20}} = 12.87$$

Present Worth T&T Cost:

(Present Worth Factor) x (FY15 T & T cost)

$$12.87 \times \$1.1816/\text{GPD} = \$15.21/\text{GPD}$$

Therefore, the T&T cost for the Town of Dedham, utilizing a present worth of the rehabilitation for a twenty-year period, with a discount rate of 4.625%, is \$15.21/GPD.

Town of Dedham T&T costs were derived using MWRA sewerage costs.

**APPENDIX F**  
**RATIONAL EQUATION**

# The Rational Equation Conversion

2014 Private Building Inspections - Dedham, MA

$$Q = c * i * a$$

Q = flow (GPD)

c = Coefficient of Runoff (Dimensionless)\*

i = 0.87 in/hr (as per DEP Peak Design Storm)

a = area (ft<sup>2</sup>)

$$Q = c * \left( 0.87 \frac{\text{in}}{\text{hr}} * \frac{24 \text{ hr}}{1 \text{ day}} * \frac{1 \text{ ft}}{12 \text{ in}} \right) * (x \text{ ft}^2) * \left( \frac{7.481 \text{ gal}}{1 \text{ ft}^3} \right)$$

$$Q = c * \left( 1.74 \frac{\text{ft}}{\text{day}} \right) * (x \text{ ft}^2) * \left( \frac{7.481 \text{ gal}}{1 \text{ ft}^3} \right)$$

$$Q = c * \left( 13.017 \frac{\text{gal}}{\text{ft}^2 * \text{day}} \right) * (x \text{ ft}^2)$$

$$\underline{Q(GPD) = c * 13.017 * a}$$

\*Coefficient of Runoff varies widely by surface type. e.g.:

c (pavement) = 0.9

c (grass) = 0.3

## **APPENDIX G**

### **INFLOW CALCULATION FOR SUMP PUMPS**

# Peak Design Storm Inflow For Sump Pumps

2014 Private Building Inspections - Dedham, MA

***Assumptions:***            1/3 horsepower sump pump  
   10 feet of head  
   30 second run time per 5 minute cycle

Using the Average Flow Curve this results in 43 gpm or 21.5 gallons per cycle

Using dimensional analysis yields

$$Q = \left(21.5 \frac{\text{gal}}{\text{cycle}}\right) * \left(12 \frac{\text{cycle}}{1 \text{ hr}}\right) * \left(24 \frac{\text{hr}}{\text{day}}\right) \quad Q = \text{flow (GPD)}$$

$$\underline{Q(\text{GPD}) = 6,192}$$

DEP Guidelines assume 4,320 to 8,640 gpd  
Weston & Sampson assumes 7200 gpd for reporting purposes

**APPENDIX H**

**REHABILITATION UNIT COSTS**

**ESTIMATED UNIT COSTS FOR REHABILITATION**
